Location: Lagos, Nigeria

Profile Summary

Motivated Platform Engineering Intern with hands-on experience in cloud infrastructure, automation, CI/CD pipelines, and internal platform tooling. Skilled in AWS, Terraform, Kubernetes, ArgoCD, Vault, and multiple collaboration and knowledge management tools. Recognized as Best Intern by the Webforx POC Committee for initiative, teamwork, and exceptional contribution to projects. Passionate about improving developer experience and building scalable, reliable internal platforms.

Technical Skills

Cloud & Infrastructure: AWS (EC2, S3, IAM, Lambda, DynamoDB, CloudWatch), AWS SSO

IaC & Automation: Terraform, Bash, Python, Vault

Containers & GitOps: Docker, Docker Compose, Kustomize, ArgoCD, Helm

CI/CD Tools: Forgejo Actions, GitHub Actions, Jenkins

Monitoring & Observability: Prometheus, Grafana, Alertmanager, Uptime Kuma

Team & Productivity Tools: Mattermost, Nextcloud, Redmine, Taiga, Bookstack, Confluence

Database Tools: DBeaver

OS & Systems: Linux (Ubuntu, Amazon Linux), Git

Internship Experience

Platform Engineering Intern – Webforx Technology, Lagos, Nigeria | Mar 2024 – Present

Key Projects & Achievements:

Environment Validation Automation

Refactored `laravel_check.sh` to dynamically validate Laravel backend environment variables from configuration repository.

Integrated into CI/CD pipelines for automated and scalable environment verification.

Alerting & Observability

Integrated Alertmanager into Grafana dashboards, providing live visibility of alerts, severities, firing/resolved status, and silences.

Configured alerts to trigger notifications to Mattermost for real-time incident response.

AWS Resource Automation

Designed and implemented Terraform-managed AWS Lambda functions to detect and clean up unused AWS resources including:

EBS unused volumes

Idle Load Balancers

Orphaned Elastic IPs

Stale CloudWatch logs (7-day retention)

Integrated multi-channel notifications via Mattermost and AWS SNS.

Ensured all Lambda functions and supporting AWS resources are fully IaC-managed with Terraform.

EC2 Lifecycle Automation

Developed a Terraform-managed AWS Lambda to start/stop EC2 instances based on a specified tag.

Improved cost management and operational efficiency with automated scheduling.

Logging and monitoring implemented via CloudWatch Logs for auditing and troubleshooting.

KMS Key Management & Rotation

Implemented Terraform-managed AWS KMS keys for core services: EBS, S3, SSM Session Manager, Auto Scaling.

Configured automated key rotation and optional Lambda-based rotation with DynamoDB logging.

Ensured secure and compliant key usage across AWS services with full documentation.

Kubernetes GitOps Deployment

Deployed Reloader using Helm & Kustomize under ArgoCD platform-tools project.

Automated pod reloads when ConfigMaps or Secrets are updated.

Configured namespace-restricted RBAC, automated sync with prune and self-healing to prevent drift.

Internal Platform Tooling Exposure

Worked with authentik (SSO), Forgejo, Taiga, Mattermost, Nextcloud, Redmine, Bookstack, Confluence.

Improved developer productivity, platform reliability, and documentation quality.

Achievement:

Best Intern Award — Recognized by Webforx POC Committee for outstanding performance, collaboration, and initiative.

Education

B.Sc. in Business Administration – University of Lagos, Nigeria | 2016 – 2020
